

Heatmap visualization of the 8x8 adjacency matrix for the 8-queens problem. The matrix is symmetric, with dark blue squares along the main diagonal (representing 1) and light orange squares elsewhere (representing 0). The columns are labeled 0 through 7 at the bottom.

A heatmap visualization of an 8x8 identity matrix. The x and y axes are both labeled with indices from 0 to 7. The diagonal elements, where the row index equals the column index, are represented by dark blue squares. All other elements, where the row index does not equal the column index, are represented by light orange squares.
